

HM-10 STEREO MICROSCOPE

The Microtec HM-10 stereo microscope has a 10.1 zoom system. The head is a parallel optics type, enabling phototubes to be inserted between the binocular head and the zoom body (as shown above). The zoom unit incorporates a double iris diaphragm, enabling the depth of focus to be adjusted both visually and when recording images. The zoom range is 0.8x to 8x, giving a possible magnification range of 4x to 360x.
